Shopping Cart User Guide

This guide is for SAP Ariba Catalog users seeking information on how to add items to and manage procurement shopping carts.

Buyer users punch in to SAP Ariba Catalog from external systems, add items to and checkout shopping carts.

This guide applies to:

- SAP Ariba Catalog

Shopping Carts

A shopping cart is a document to which you add items that you want to purchase. Each shopping cart is assigned a unique ID (such as SH1234) to identify and track it as it moves through the shopping process.

A new shopping cart is automatically created when you punch in to SAP Ariba Catalog. You can access your current shopping cart any time by clicking the **Cart** icon on the toolbar.

Related Information

[Workflow of the Shopping Process \[page 5\]](#)

[PunchIn Modes and Available Actions \[page 6\]](#)

Workflow of the Shopping Process

The workflow of the shopping process involves the following basic steps:

1. Punch in to SAP Ariba Catalog.
The Catalog Home Page is displayed and a new shopping cart is automatically created. To view previously saved shopping carts, click **Saved Carts** on the toolbar.
2. Browse the customer catalog to add items to the shopping cart or add non-catalog items to the shopping cart.
3. To view the contents of the current cart, click the **Cart** button, and then click **Review Cart**.
4. Review your items, edit or delete items and click **Checkout** to check out the cart to your external procurement system.

The actions that you can perform in SAP Ariba Catalog depend on the mode that you punch in. You can punch in to SAP Ariba Catalog in one of the following modes:

- Create mode
- Edit mode
- Inspect mode

The functionality of saving shopping carts in SAP Ariba Catalog is available in the default configuration. You cannot save shopping carts if this functionality is disabled for your site.

PunchIn Modes and Available Actions

PunchIn Mode	Actions you can perform
Create	A new shopping cart is automatically created when you punch in the create mode. You can check out or save the current cart. Click the Saved Carts button to view the carts that you previously saved.
Edit	You punch in to SAP Ariba Catalog with a unique shopping cart title. Only the associated shopping cart is displayed. You can edit the cart and check out the cart or save the cart and exit SAP Ariba Catalog. You cannot view your previously saved carts or create new carts.
Inspect	You punch in to SAP Ariba Catalog with a unique shopping cart title. Only the associated shopping cart is displayed. You cannot edit the shopping cart, but can make a copy it. You can then edit the copied shopping cart and either check out or save the cart in SAP Ariba Catalog and exit to your external procurement system. You cannot view your previously saved carts or create new carts.

Shopping Carts Management

Creating Shopping Carts

Prerequisites

A new shopping cart is automatically created when you punch in to SAP Ariba Catalog.

ⓘ Note

On the **Review Cart** page, if you change the quantity of a kit item at the header level, only those kit items that are configured as required are updated. The quantity of optional kit items is not updated. You must update the quantity for these items manually if required.

Procedure

1. Punch in to SAP Ariba Catalog. The customer catalog home page is displayed and a new shopping cart is created.
2. Add items to the shopping cart by searching or browsing for items in the customer catalog home page.
For information on using the customer catalog, see [Customer Catalog User Guide](#).
3. Click the **Cart** icon and click **Review Cart** to view the shopping cart contents.

Adding a Single Customer Catalog Item to the Shopping Cart

Context

In the customer catalog search results page an **Add to Cart** button is available for each local customer catalog item. When you add items, a pop-up displays the details of the items that you have added recently.

Procedure

Do one of the following:

- For the item you want to add to the shopping cart, enter the quantity that you want to order, and click **Add to Cart**.
- Click an item link to view the item details, enter the quantity that you want to order, and click **Add to Cart**.

Adding Multiple Customer Catalog Items to the Shopping Cart

Procedure

Select the check box for each item you want to add, then click **Add to Cart**.

Adding Partial Items to the Shopping Cart

Prerequisites

The feature to add multiple partial items at once is not enabled in the default configuration. To enable this feature, contact your Designated Support Contact to log a service request and an SAP Ariba Customer Support representative will contact you.

If a partial item has more than eight attributes, the additional details pop-up is not displayed. You enter additional item details on the **Enter Item Information** page that is displayed.

Procedure

1. Find the item you want to add.
2. On the search results page, click **Add to Cart**.
3. In the pop-up window that appears or on the **Enter Item Information** page, specify additional details, and click **Add**.

PunchOut Items

Depending on your customer catalog configuration, you either punch out to the supplier's website to search for items (store-level PunchOut), or you search your local customer catalog for items and then punch out to the supplier's website to add the item to your shopping cart (item-level PunchOut).

Alternatively, your customer catalog might be configured for a more detailed punch out. For example, if you search the customer catalog for a particular item, and matches are found in a supplier's PunchOut catalog, you can view

the supplier's PunchOut catalog to see store, aisle, shelf, or item-level results that represent different granularity in item grouping for browsing.

Customer catalog items configured for item-level punch out are identified with a **Buy from Supplier** button on the customer catalog search results page. When you click the button, you punch out to the supplier's website and can place your order there.

What you see on the supplier's website depends on the supplier, but when you have selected your items, added them to the supplier's shopping cart, and checked them out, the selected items are shown in SAP Ariba Catalog.

Helpful Hints for Adding PunchOut Items

- When you punch out to a supplier's site, you can click **Close PunchOut Catalog Shopping Session** in the upper right of the page to exit the supplier site without adding an item to your shopping cart.
- In the customer catalog search results page, you cannot add multiple item-level PunchOut items to your shopping cart in one transaction by selecting multiple items and clicking **Add to Cart**. However, depending on how your customer catalog is configured, you might be able to add multiple items by using PunchOut to access your supplier's website, searching for items and then adding them to the shopping cart.

Non-Catalog Items

When you add a non-catalog item you will need to provide the following information:

Option	Required Action
Full Description	Enter a description of the item.
Commodity Code	Select a commodity code from the available choices, or click Search for more to select a different commodity code.
Quantity	Enter the quantity of the new item you are adding.
Unit of Measure	Select a unit of measure from the available choices, or click Search for more to select a different unit of measure.
Price	Enter the item price, or an estimated price. The total value of the shopping cart determines the default approvers, who must have a price to approve the request. If you change the price or quantity, click Update Total to update the shopping cart total Select a currency from the available choices, or click Other to select a different currency.
Amount	This is a read-only field that is updated when you click Update Total .
Additional Pricing Details	Enter additional pricing details if required. For more information on advanced pricing details, see Advanced Pricing Details and Fields .

Option	Required Action
Supplier	Select a supplier from the available choices, or click Search for more to select a different supplier. If available, select a supplier configured as a preferred supplier for the selected commodity code. A value of Yes in the Preferred Supplier column indicates that the supplier is configured as a preferred supplier.
Contact	The value for this field changes depending on the supplier you choose. Click the contact name to see details for that person. Click select to select another contact for the supplier you chose.
Supplier Part Number	Enter the Supplier Part Number for the item.
Supplier Auxiliary Part ID	Enter the Supplier Auxiliary Part ID for the item.

Adding a Non-Catalog Item

Prerequisites

You must not belong to the **No Ad-hoc Item** group in order to see the **Create Non-Catalog Item** button and add non-catalog items to shopping carts.

If you can't find what you need in the customer catalog, you can create non-catalog items by describing what you need so that a purchasing agent can locate and order the items for you.

Procedure

1. On the customer catalog home page, click **+ Non-Catalog Item**. If you are in the customer catalog home page, or the customer catalog search results page, click **Create Non-Catalog Item**.
2. Enter the non-catalog item information in the fields provided. For additional information, see [About Adding Non-Catalog Items \[page 9\]](#).
3. Click **OK**. The item is added to your shopping cart.

Editing Shopping Cart Line Items

You can edit line item properties and details, such as order quantity, supplier, or item description for an item from the **Shopping Cart** page. The attributes you can edit depend on the type of item:

- For customer catalog items, you can edit the order quantity.
- For non-catalog items, you can edit all of the item's properties you specified when you added the item.
- For partial items, you can edit the quantity and any additional item details required to place the order.

Related Information

[How to Edit and Review Line Item Properties \[page 11\]](#)

[How to Edit Additional Line Item Details for Partial Items \[page 11\]](#)

[PunchOut Items Editing \[page 13\]](#)

How to Edit and Review Line Item Properties

Procedure

1. From the **Shopping Cart** page, click the check box for the item you want to edit, then click **Edit**.
2. On the **Edit Line Item** page, review and edit the item as needed.
3. Do one of the following:
 1. Click **OK** to save the change and return to the previous screen.
 2. Click **Cancel** to return to the previous screen without saving changes.

How to Edit Additional Line Item Details for Partial Items

Procedure

1. From the **Shopping Cart** page, click the check box for the partial item you want to edit, then click **Edit**.
2. On the **Edit Additional Item Details** page, enter information specific to the item you are ordering, such as price, unit of measure, your direct phone, URL, translation, title or position, E-mail address, whether to include a logo on the item, fax number, first and last name.

3. Do one of the following:
 1. Click **OK**, then click **Save** to associate the additional line item details with your order.
 2. Click **Cancel** to return to the Shopping Cart without saving your changes.

How to Delete Items from the Shopping Cart

Procedure

On the shopping cart summary page, mark the check boxes for the items that you want to delete and click **Delete**.

Deletion of PunchOut Items

Deleting PunchOut items might affect the cost of other PunchOut items added to your shopping cart. For example, if you order two items with an agreement that if you buy one you get the second at a 50% discount, and then you delete one, the cost of the other item must be calculated differently.

If you want to delete only a portion of the PunchOut items from a supplier, you need to do that from the supplier's website. A confirmation message is not issued before the items are deleted.

Deleting All PunchOut Items

Procedure

On the shopping cart Summary page, select the check box for all items from that supplier, then click **Delete**.

Deleting Selected PunchOut Items

Procedure

1. On the shopping cart Summary page, select the check box for the item you want to delete, then click **Delete**.
2. On the **Delete Line Item** page, click one of the following:
 - **Delete** to delete all items from this supplier
 - **Edit** to punch out to the supplier's website where you can delete selected items from your shopping cart
 - **Cancel** to cancel the action and return to your shopping cart.

PunchOut Items Editing

Your company might have agreements with suppliers for discounts on items from the suppliers' customer catalogs. To change PunchOut items in your shopping cart, you must return to the suppliers' website, since changes may affect the discounts applied to the final orders.

Editing PunchOut Items

Procedure

1. On the shopping cart Summary page, click the check box for the item you want to edit and click **Edit**.
2. On the item review page, click the **Edit this PunchOut catalog item** link.
3. Make your changes on the supplier's website and return to the shopping cart in SAP Ariba Catalog.

Line Items Mass Edit

You use mass editing when you are attempting to edit multiple line items at the same time. This is useful when you need to make the same change to multiple line items.

When you select multiple line items for mass edit, the fields with their values displayed are from a sample line item that is selected from the shopping cart. SAP Ariba Catalog selects a sample line item based on its restrictive characteristics. That is, if the shopping cart contains a PunchOut line, a customer catalog, and a non-catalog line item, it selects the PunchOut line item as the sample. If there are line items of only one kind (that is, all PunchOut, or all customer catalog lines items), then the first line item among the selected lines becomes the sample line item.

When you make changes in this page, only those changes to the selected fields get propagated to the rest of the line items that are chosen for mass edit. The unchanged field values in this page do not get propagated to the other line items.

If the change you make to a field is not valid, the error message appears immediately on input, but this validation check does not stop you from completing the mass edit operation.

All validation checks are performed based on the field values in the sample line item only. That is, if for example, you made a change to a field that is dependent/associated to another field (say you change the Business Unit value that is associated to a specific Cost Center); the validation check determines whether this change is valid with respect to the Cost Center value that exists in the sample line item only. But, this change may not be valid for other selected line items. Such possible errors are not displayed during the mass edit phase.

Mass Editing a Shopping Cart

Prerequisites

The **Line Item Details** section is not displayed if the selected line items contain services items.

You cannot mass edit line item details if your selection contains a combination of goods and services items.

Procedure

1. On the shopping cart summary page, mark the checkboxes against the line items that you want to edit or mark the **Select All** checkbox to select all the line items.

ⓘ Note

Selecting a customer catalog kit header line item automatically selects all the kit items and any changes made are applied to all the items in the kit.

2. Click **Edit**. The mass edit page displays the **Line Item Details** section.

3. Click **Next** after making the necessary changes. The review page displays the changed fields and their values.
The changes made to each field are applicable to all the selected line items.
4. Click **Done** to save your changes and return to the shopping cart summary page.

Mass Editing of Partial Items

Prerequisites

Partial items must belong to the same Type in order to be mass edited.

Restriction

The **Additional Line Item Details** section only appears if you have selected two or more partial items of the same type.

Procedure

On the shopping cart summary page, select partial items belonging to the same Type, and click **Edit**.

Mass Editing Collaboration Options in a Shopping Cart for Goods Items

Prerequisites

You must be a member of the **Dynamic Collaboration User** group to see the **Collaboration** radio button on the mass edit page. The **Collaboration** radio button must be configured to be mass editable.

When all items you select are goods items, the **Collaboration** radio button is displayed on the mass edit page.

Note

The **Collaboration** radio button is not displayed if the collaboration property of the selected items is a combination of **Required**, **Allowed**, or **Disallowed**.

Procedure

1. On the shopping cart summary page, mark the check boxes against the goods line items that you want to edit or mark the **Select All** check box to select all the line items.
2. Click **Edit**. The mass edit page displays the **Collaboration** radio button in the **Line Item Details** section.
3. Select **Yes** to make all the selected items collaborative or select **No** to make all the items non-collaborative. The selection is applied to all the line items only if you make a change to the **Collaboration** radio button.
4. If you select Yes, the **Invited Suppliers** dialog box is displayed.
5. Click **Change** to add or remove suppliers. Clicking **Add** to invite more suppliers will display a list of all the available suppliers in the system.
6. Click **Next** after making the necessary changes. The review page displays the changed fields and their values. The changes made to each field are applicable to all the selected line items.
7. Click **Done** to save your changes and return to the shopping cart summary page.

The edited field values are validated and an error message is displayed against the line items that contain invalid values. Edit each line item individually to rectify the errors.

Checking Out the Shopping Cart

Context

After you have added items to your shopping cart, you check out the shopping cart to your external procurement system.

Procedure

On the shopping cart summary page, click **Checkout**.

Saving a Shopping Cart

Context

After you have finished adding items to your shopping cart, you can return to your external procurement system with the shopping cart or choose to save it in SAP Ariba Catalog. You can later return to SAP Ariba Catalog, access your saved shopping carts from the saved shopping carts page, and complete the shopping process.

Procedure

1. On the shopping cart summary page, click **Close Cart**.
2. Click **Save** to save the cart and return to the customer catalog home page.

Finding a Saved Shopping Cart

Context

You can use filters when searching for saved shopping carts. Not all search filters are displayed by default; you can add and remove filters as needed.

Procedure

1. Punch in to SAP Ariba Catalog and click the **Saved Carts** button.
2. Locate or search for the shopping cart using the search filters.
3. Select the shopping cart and click **Edit**.

The shopping cart summary page is displayed.

Shopping Cart Search Filters

Search Filter	Description
Date Created	The date the shopping cart was created. You can select any one of the available options or select Custom and enter a From and To date.
Description (any line item)	Description of any line item.
ID	The shopping cart ID.
Non-Catalog Item (any line item)	Select whether you want to search for shopping carts that contain non-catalog items or not.
On Behalf Of	The name of the user on whose behalf the shopping cart was created. Click Select and then select a user from the list.
Preparer	The name of the user that created the shopping cart. Click Select and then select a user from the list.
Price (any line item)	The price of any one of the line items that is within a specified range. Enter values for the price range.
Shopping Cart Name	The name of the shopping cart.
Status	The status of the shopping cart.
Supplier (any line item)	The supplier of any one of the line items. Click Select and select supplier from the list.
Total Cost	The total cost of the shopping cart that is within the specified range. Enter values for the total cost range.

Copying a Saved Shopping Cart

Context

If an item in a shopping cart contains a default price from the customer defined field (CDF), even if that price is \$0, then that CDF price is copied to the shopping cart. If a default price is not specified in the CDF, the price from the original shopping cart is copied over to the new shopping cart. This price is what the supplier sees when viewing a collaboration request, unless it is changed by the buyer when creating a requisition.

Procedure

1. Punch in to SAP Ariba Catalog and click the **Saved Carts** button.
2. Locate or search for the shopping cart using the search filters.
3. Select the shopping cart that you want to make a copy of and click **Copy**.
4. A copy of the selected shopping cart is created and added to the **Saved Shopping Carts** list.
5. Select the new shopping cart and click **Edit** to open the cart.

Deleting a Saved Shopping Cart

Procedure

1. Punch in to SAP Ariba Catalog and click the **Saved Carts** button.
2. Locate or search for the shopping cart using the search filters.
3. Select the shopping cart and click **Delete**.
